

MAINSTREAM
WATER SOLUTIONS INC.

Mainstream is the 'Green' Choice for Drinking Water Treatment

FOR IMMEDIATE RELEASE
October 20, 2009

(Staff Writers) Taking care of the environment is becoming increasingly important.

Mainstream's chemical-free drinking water treatment systems are the most environmentally friendly systems available for removing bacteria, iron, manganese, colour, staining, odours, turbidity, dissolved organics, tannins, arsenic, and much more from drinking water. Ozone-assisted biofiltration technology has proven to be highly effective, economical, and simple to operate for many communities across Western Canada. Our municipal systems meet and exceed the latest water quality standards for ground water, dugout, lake, and river sources.

Here's what makes our system the greenest:

- Treatment is chemical-free.
- Regulatory standards and aesthetic objectives are met with minimal chlorination.
- Raw water is efficiently utilized.
- Wastewater production is the lowest, compared to other methods of water treatment.
- The simple gravity flow design reduces electrical consumption.
- The system is easy to operate, and ongoing maintenance requirements are minimal.
- The modular design supports future demand changes, whether your

system is residential, commercial, agricultural, or municipal.

As complete water treatment project specialists, we offer our clients unique, proven, and environmentally friendly water treatment technology packages that are custom-designed for each customer. Our comprehensive project planning and execution services include planning, operational training, and long-term support.

For further information about Mainstream and its chemical-free systems, please visit our website at www.mainstreamwater.com or give us a call at 306.761.5000 or toll-free at 1.866.274.9789.
