WATER SOLUTIONS INC.

Shoal Lake Open House & Water Treatment Demonstration

FOR IMMEDIATE RELEASE
August 17, 2009

(Staff Writers) Please join us on Tuesday August 25th, 2009 for a come-and-go open house and on-site operating demonstration of Mainstream's environmentally friendly biofiltration drinking water treatment system. Hosted by Mainstream Water Solutions Inc. of Regina, Saskatchewan, and B&D Well Doctors of Brandon, Manitoba.

Mainstream specializes in providing cost-effective and custom-designed drinking water treatment systems for municipal, residential, commercial, and agricultural customers. Mainstream's systems use proven technology to provide exceptional-quality water from even the most difficult-to-treat raw water sources, including wells, rivers, lakes, and dugouts. B&D Well Doctors is the authorized dealer of Mainstream systems in Manitoba.

Our chemical-free drinking water treatment systems are the most environmentally friendly systems available for removing bacteria, iron, manganese, colour, staining, odours, turbidity, dissolved organics, tannins, arsenic, and much more from water. Please see the attached PDF for a listing of the environmental advantages of our systems.

As complete water treatment project specialists, we offer our clients unique, proven, and environmentally

friendly water treatment technology packages that are custom designed for each customer. Our comprehensive project planning and execution services include planning, operational training, and long-term support.

For more information about the Open House, or Mainstream's chemical-free drinking water treatment systems, please contact:
