

MAINSTREAM
WATER SOLUTIONS INC.

Mainstream is a Chemical-Free Solution for Small Communities

FOR IMMEDIATE RELEASE
September 9, 2009

(Staff Writers) Does your community face challenges in meeting the latest water quality standards?

These days, increased emphasis and legislative action are being focused on drinking water quality. Mainstream's economical ozone-assisted biofiltration systems have been successfully tested over the past twenty years, and have a proven track record in municipalities across Western Canada. The recent completion of the new drinking water treatment plant in Dunrea was the first of its kind in Manitoba. The Government of Manitoba has also contracted Mainstream for a water treatment project, which is currently in the design phase.

Our biofiltration systems exceed the latest water quality standards, by effectively removing bacteria, iron, manganese, colour, staining, odours, turbidity, dissolved organics, tannins, and much more from tough-to-treat surface, ground, and GUDI water.

Mainstream's systems are custom-designed to suit each customer's specific needs and conditions, and can provide from 1m³ to 1,000m³ of treated drinking water per day. Our systems are specifically well-suited for small communities, since they are chemical-free, cost-effective, easy to operate, and are modular in design, which allows for future expansion.

Mainstream's chemical-free systems are also the "greenest" option available, featuring the highest efficiency for utilizing raw water, the lowest wastewater production, a simple gravity flow design, and low electrical consumption.

As complete water treatment project specialists, we offer our clients unique, proven, and environmentally friendly water treatment technology packages that are custom-designed for each customer. Our comprehensive project planning and execution services include planning, operational training, and long-term support. We are also happy to provide assistance with submitting grant applications for infrastructure funding, as water treatment upgrades are a high priority for all levels of government.

Warren Hermanson would be happy to set up an appointment to speak to your council about your specific water treatment needs. Please feel free to give him a call at 306.761.5000 or toll-free at 1.866.274.9789. You can also visit our website for more information at www.mainstreamwater.com.
